

Full-stack developer building web systems and microservices. Designed and deployed public platforms for 10K+ users with sub-50ms APIs. Runs a freelance design and engineering agency, delivering and maintaining multiple enterprise companies. Strong in TypeScript-based stacks, DevOps workflows, and scalable system architecture.

TECH STACK

TypeScript, JavaScript, Rust, React, Next, Express, Elysia, Vue, Tailwind, Node, Bun, PostgreSQL, MongoDB, SQLite, Redis, RabbitMQ, Convex, Traefik, Nginx, tRPC, AWS, Oracle OCI, Git, GitHub Actions, Jenkins, Linux, Docker, Kubernetes, Prometheus, Grafana, OpenTelemetry, OpenRouter, AI SDK.

PROJECTS

Zephyr - Social Media Aggregator & Platform — zephyrr.in

- Built a unified social media platform aggregating content from multiple networks, reaching 10K+ page views post-launch.
- Designed with a microservice architecture using message queues and distributed caching for scalability and fault tolerance.
- Fully self-hosted, encompassing databases, cache, object storage, CI/CD pipelines, and microservices for auth and logs behind a Traefik proxy, delivering 30x faster performance with API response times of ≈ 50 ms through streamlined request handling.
- Utilized: Next, React, Typescript, Tailwind, PostgreSQL, Prisma, Redis, RabbitMQ, tRPC, AWS, Jenkins, Docker, Traefik

Lumen - Real-Time Collaborative Workplace Platform — lumen.itssingularity.com

- Built a real-time, infinite-canvas application enabling multiple users to plan, edit, and organize work simultaneously.
- Designed a collaboration system that supports concurrent edits, live cursors, comments, and instant state synchronization across shared boards with scalable WebSocket-based infrastructure to handle high-frequency while smooth interactions and low latency.
- Integrated AI with subagents board generation, chat, permissions, and sharing to support fast setup and team workflows.
- Utilized: Next, React, Typescript, Tailwind, Zustand, Yjs (CRDTs), WebSockets, Elysia, Bun, Redis, Prisma, PostgreSQL, OpenTelemetry, Grafana, Prometheus, Docker

Snix - Code Snippet & Boilerplate Manager

- Built high-performance TUI & CLI snippet manager, supporting 25+ languages with syntax highlighting and real-time rendering.
- Implemented comprehensive data management with hierarchical notebook system, UUID-based entities, tag relationships, and JSON-based storage with atomic operations and version tracking.
- Advanced search including fuzzy search, tag-based filtering, multi-format export/import.
- Utilized: Rust, Ratatui

EXPERIENCE

Full Stack Developer Intern | amasQIS.ai

- Built WebSocket APIs and backend for a full-stack HRMS using MERN stack and MongoDB, handling real-time CRUD operations and powering admin and super-admin dashboards.
- Built RESTful APIs with FastAPI & Python to manage concurrent video streams in a multi-camera security system.

Remote (Muscat, Oman)
April 2025–December 2025

President | Mozilla Firefox Club

- Led all club operations, including strategizing and executing diverse events, managing teams, overseeing websites, CTF, hackathons and securing speakers to promote open-source principles.

On-Site (Bhopal, India)
June 2025–February 2026

Infrastructure Engineer | Singularity Works - itssingularity.com

- Built selfhosted and managed infrastructure to deliver secure, scalable, and cost-efficient systems, Implemented CI/CD workflows with actions and docker compose.
- Owned full project lifecycle: architecture, development, deployment, and post-launch support.

Remote (Bhopal, India)
August 2025–Present

ADDITIONAL

Open Source & Hackathons: Project Administrator for Social Winter of Code 2025 achieved top rankings (#2 in Week 1-3, #8 overall out of 450+ admins) for project mentorship. Contributed during Hacktoberfest 2024 & 2025 (24 PR's), Won the Wikimedia Track Hackbyte 3.0 2025 by MLH at IIITDM Jabalpur.

Research Publication: Authored the research paper: "Fine-Tuning for Code Intelligence: Evaluating LLMs on Custom Programming Benchmarks," accepted for presentation at the CICBA 2025 Conference at Springer.

Freelance: Delivered and maintained production platforms for international clients, including enterprise systems, owning end-to-end delivery from build to deployment and ongoing support across multiple active and upcoming projects.
